Abstract: This paper presents an experiment which use THz radiation for detection and identification of the metallic objects and illegal substances inserted in nonmetallic boxes. Using THz imagistic technique was obtained 20 images of the metallic objects hidden, and with THz spectroscopy was identified the substances from paper box. In this experiment was used the Terahertz Time - Domain Spectroscopy kit from EKSPLA which have frequency domain 0.1-5THz, and 50GHz precision.
