REVIEW OF SCIENTIFIC INSTRUMENTS, vol.82, no.10, OCT 2011, 106104.

Abstract

A femtosecond (fs) terahertz (THz) linac has been constructed to generate fs-THz radiation by using ultrashort electron beam at the Pohang Accelerator Laboratory. To generate an ultrashort electron beam with 60-MeV energy, a chicane bunch compressor has been adopted. Simulation studies have been conducted to design the linac. In this note, recent achievements at 60-MeV linac are presented. (C) 2011 American Institute of Physics. [doi:10.1063/1.3652980]
