Title

Voltage Controlled Terahertz Transmission Enhancement through GaN Quantum Wells

Source

Acta Physica Polonica A, vol.119, no.2, Feb. 2011, 107-10. Publisher: Institute of Physics of the Jagellonian University, Poland.

Abstract

We report transmission measurements of GaN quantum well grown on sapphire substrate in the 220-325 GHz frequency band at low temperatures. A significant enhancement of the transmitted beam intensity with the applied voltage on the devices under test is found. (15 References).
