Abstract:Wideband quasioptical spatial multiplexers and demultiplexers were developed and tested for GHz and THz bands. These elements are based on dielectric splitting plates and metal strip gratings, placed in diagonal planes of orthogonal branches in metal-dielectric waveguides with square cross-section. Optimization of such devices have been done as well. © 2012 by Begell House, Inc.

Main heading:Demultiplexing
Controlled terms:Electromagnetic waves - Multiplexing - Multiplexing equipment - Optical beam splitters - Strip metal
Uncontrolled terms:Demultiplexers - Metal strip grating - Metal-dielectric waveguide - Quasi optics - Quasi-optical - Square cross-section - Wide-band
Classification code:535.1 Metal Rolling - 711 Electromagnetic Waves - 716 Telecommunication; Radar, Radio and Television - 717 Optical Communication - 718 Telephone Systems and Related Technologies; Line Communications - 741.3 Optical Devices and Systems
